

Black Point Marina and Dry Storage: Vessel launch and arrival									
	07/20/2008 (Sun., 8:00 am to 2:00 pm)				11/15/2008 (Sat., 8:00 am to 2:00 pm)				Total Actions Counted
	# berths leased	Launch	%	Arrive or take out	# berths leased	Launch	%	Arrive or take out	
Boat Barn	240	29	12	14	230	20	9	3	66
Wet Slips	178	27	15	3	171	10	6	3	43

Additional observations:

- The above observations do not include launches from the boat ramp, use of small transient or courtesy docks available for day or short-term use, or activities of law enforcement vessels.
- Highest frequency of launches occurred between approximately 9:30 am and noon in July. During this period, an average of 1 vessel was launched from the dry storage barn every 5 – 6 minutes, and an average of 1 vessel departed the marina basin every 10 minutes.
- 100% of vessels launched or recovered at dry storage on both observation dates were power boats (open motorboats, cabin motorboats, or performance design motorboats). During the July and November observation periods, 7% and 23% respectively of the vessels departing the marina basin were sailboats (with auxiliary power).
- The average length of vessels observed going to and from the dry storage barn is less than average length of vessels going to and from marina wet slips. Size-class distribution of vessels going to and from dry storage was: 16-25'=57%; 26-39'=43%. Size-class distribution for vessels going to and from the marina basin slips was: 16-25'=30%; 26-39'=51%; 40-64'= 19%.
- The dry storage facility occupancy (leased) rate was 80% in July and 75% in November, according to information provided by the operator. The long-term wet slip occupancy (leased) rate was 99% in July and 95% in November, according to information provided by the Park and Recreation Department.
- On July 20, Miami-Dade Marine Patrol was observed on four occasions, and on November 15, Miami-Dade Marine Patrol was observed on two occasions.
